Re: Agentic AI Product Manager · WW Channel Strategy & Operations · Austin (Role 200664473-0157)

Dear Hiring Manager,

I'm an Apple alum. Twelve years in infrastructure technical program management, including cross-functional work with Apple Online Store, Apple Pay, and Retail Apps. For the past year I've been building production agentic AI systems end-to-end, and this role looks like the cleanest fit I've seen for the work I've been doing.

The career move from program management into agentic AI product delivery has been deliberate. I'm currently embedded as investor and Agentic AI Product Consultant at a hyperlocal creator-business marketplace startup. The flagship project there is **MatchScout**, a gig-driven AI recommender I designed and shipped.

The eval framework is the part worth highlighting. We hold out a no-LLM control arm and measure whether the LLM actually moves real downstream gig outcomes. Prompt versions are stamped on every recommendation, so we A/B-test prompt iterations against real outcomes rather than synthetic golden sets. LangSmith gives one-click trace drill-down from the outcome dashboard, and we track per-call USD cost alongside quality. The "build evaluation frameworks, monitor production accuracy, drive prompt iteration cycles based on eval results" line from your posting describes the actual loop we run.

In parallel I've authored **HPRC Framework**, an open-source (Apache-2.0) AI-native server-side templating engine. The architecture is a dependency-graph scheduler with six interchangeable LLM provider adapters, built from scratch to think through agent infrastructure properly. I've also built a production **MCP (Model Context Protocol)** server with a generic agentic loop that dispatches tools dynamically with zero hardcoding, which lines up directly with your preferred MCP qualification.

A note on fit. My Apple work was deeply cross-functional with exactly the business surfaces WW CSO operates next to. I ran the infrastructure programs supporting Apple Pay, Apple Online Store, and Retail Apps, which means I know the partner teams, the operating cadence, and the launch-readiness rhythm those orgs run. Doing that kind of work now as a builder of agents is the move I want to make.

I'd like to talk about the role and what the team is shipping. Resume attached.

Best,

Rajesh Ramani
