Hiring Team Palo Alto Networks

Re: 10x AI Engineer

Dear Hiring Team,

I am writing to apply for the 10x AI Engineer role at Palo Alto Networks, and I am highly motivated by the chance to contribute to your AI-first enterprise effort. Building practical AI workflows inside a company that is shaping the future of cybersecurity is exactly the kind of work I have been preparing for.

After more than a decade at Apple leading large infrastructure programs, and an earlier role as Senior PM in PayPal's Information Security organization, I made a deliberate decision to move into agentic AI as a hands-on builder. Over the past several months I have been building real AI systems end to end. I designed and built MatchScout, a proof-of-concept AI recommender at a hyperlocal creator marketplace startup. It pairs businesses with creators using a LangGraph pipeline that combines a rules filter, a vector search, and a Claude re-ranker, and it is evaluated through a two-arm A/B test against real gig outcomes rather than asking another LLM to grade the output. I also built and open-sourced the HPRC Framework, a templating engine where developers embed LLM prompts directly inside HTML and the framework runs them with adapters that work across six different LLM providers.

What draws me to this role is the focus on putting AI to work inside an enterprise that takes security, privacy, and compliance seriously. At Apple, I built PCI-compliant secure environments and partnered across SRE, security, network, storage, finance, and IT teams to deliver large infrastructure programs. At PayPal Information Security, I worked on DDoS prevention, hardware security modules, bastion infrastructure, and real-time traffic analysis for fraud detection. I bring both that enterprise integration background and the recent hands-on agentic AI work that lines up directly with your job description: retrieval, prompting, tool calling, orchestration, evaluation, observability, and a careful editor mindset for reviewing AI-generated code.

I am highly motivated for this role because it would let me apply real agentic AI engineering inside a security-first enterprise, alongside engineers I would learn from every day. I am ready to roll up my sleeves and contribute from day one, and I welcome the chance to discuss how I can help.

Thank you for your time and consideration.

Sincerely,

Rajesh Ramani
